Art Unit: 3712

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-4, and 10 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

In claim 1, line 2, "between a resting position and a firing position" does not appear to be accurate, because the primary magnet in the trigger and the secondary magnet behind the trigger repel each other, therefore assisting movement of the trigger "between a firing position and a resting position".

Claim 10 requires a first solenoid (32, figure 4) behind the trigger, and a second solenoid (30) in front of the trigger; where the first solenoid is effective to assist the trigger to move from the resting position toward the firing position, and the second solenoid is effective to move the trigger from the firing position toward the resting position. However, it is not clear how this is possible, because when the first solenoid is energized, its rod 36 is

extended toward the resting position, which would push the trigger away from the firing position; likewise, when second solenoid 30 is energized, its rod 34 is extended toward the firing position (page 10, lines 4-16).
